### ***Industrial Heritage in the Twenty-First Century, New Challenges***

The beginning of the twenty-first century has seen **considerable renewal** in how the industrial heritage is considered. Its contribution to our understanding of the past, the way it is approached by academic research, its place in the evolution both of landscapes and of societies, all these are witnessing rapid change. Under the title “Industrial Heritage in the Twenty-First Century, New Challenges”, the sixteenth TICCIH Congress to be held at Lille and in its region in 2015 aims to give a general, worldwide review of the present-day state of industrial heritage, opening up new perspectives on the people involved in it, its achievements and its recognition.

Much effort is still necessary to give industrial heritage the social recognition it deserves, but the Congress will show how, throughout the world, it is a heritage that can make contributions where contemporary demands are concerned, in terms of **sustainable development**, urban regeneration, architectural invention, local economies, culture and education. The role of the citizen and the part that citizens can play will be at the heart of our approach. We keep this heritage because it means something to us and we want to keep that meaning for future generations. But what precisely does the industrial heritage mean to today’s societies? What importance do these societies attach to industrial heritage? What influence can industrial heritage have on the way societies evolve?

Lille and its region represent one of the richest industrial territories in France, with a tremendous diversity of activities: coal mining, textiles, mechanical engineering, chemical industries and agricultural and food-based industries, as well as a mail-order sector which takes advantage of its location and of a remarkably dense transport networks. The industrial and cultural landscapes of the Nord-Pas-de-Calais region are many and varied, marked by successive waves of immigration. Over recent years, as elsewhere, they have suffered from the effects of deindustrialization.

Held at Lille and in its region, the Congress will show how and why the recent inscription of this region’s mining basin on UNESCO’s list of world heritage as a continuing cultural landscape symbolizes how our ways of appreciating the industrial past and the traces it leaves—both material and intangible—are changing, both for citizens and for institutional organizations. The Nord-Pas-de-Calais mining basin is a splendid illustration of the how TICCIH’s principles, laid out in the Nizhny Tagil Charter, correspond with the criteria established by ICOMOS and UNESCO. For the local community, the recognition of the outstanding universal value of the landscape is of tremendous significance, underlining the strength of its identity, its culture and its resilience.

**TICCIH** (The International Committee for the Conservation of the Industrial Heritage) is the only international organization of this magnitude in this area, recognized by UNESCO and ICOMOS. CILAC is the representative organization for TICCIH in France. [ticcih.org](http://ticcih.org)

**CILAC** (Information and Committee liaison for archaeology, the study and development of industrial heritage) is a non-profit association, founded in 1979. It was and remains the first French organization to assert the importance of recognition of industrial heritage. Its mission is to promote the protection of industrial heritage. It publishes the only French-speaking journal in this domain “*Patrimoine industriel*” the recent successor to “*L’Archéologie industrielle en France*”. [www.cilac.com](http://www.cilac.com)

# LA FRESQUE MINEURS DU MONDE

## Mémoires de Mines

If you are fond of industrial heritage, discover the Miners of the World digital fresco, result of a co-production between the Nord-Pas de Calais Regional Council and the National Audiovisual Institute (Ina).

The Miners of the World fresco is a film library freely available on the Internet, gathering more than 350 extracts from french television archives, selected and commented on by the best specialists.

This tool allows everyone to dive into the heritage of generations of coal miners and engineers who created and shaped the mining district of the Nord-Pas de Calais Region, listed as a UNESCO World Heritage site since 2012.

This approach is not only about paying tribute to these workers but also an approach of historical research and a source of collective pride.
